

## Abstract

Perfectionism is a well-known personality trait. Many researches have investigated the various types of perfectionism and problems that are caused by perfectionism. The current study will also introduce different types of perfectionism and different dimensions of perfectionism. In the present paper, it hypothesizes that females score higher in socially prescribed perfectionism than males, and there will be gender difference in self-oriented perfectionism. A confirmatory factor analysis and independent-sampled T test were used to analyze the data.
